Summary

Software engineer who scopes and delivers systems directly with stakeholders, from requirements through production support. 4+ years on Azure and .NET: designed 30+ REST APIs, the caching architecture, and the security model for a national retail co-op's storefronts, and integrated third-party platforms under real authentication and rate-limit constraints. Built an AI in-call coaching assistant that won the company IT hackathon and is now an active company project.

Technical Skills

AI/LLM: AI agents and assistants, MCP (Model Context Protocol) server design and integration, LLM API integration, agent orchestration, prompt workflows, speech-to-text pipelines, Claude, GitHub Copilot
Languages & Frameworks: Python, TypeScript, JavaScript, C#/.NET, Node.js, SQL/T-SQL, Java, ASP.NET MVC, React.js, Java Spring
Azure: App Service, Azure Functions, Container Apps, Container Registry, Blob Storage, Service Bus, Event Grid, Key Vault, Entra ID (managed identities), Azure SQL, Cosmos DB, Azure Monitor, Cost Management
Integration & Data: REST APIs, webhooks, OAuth 2.0, microservices, PostgreSQL, MongoDB, Redis, third-party API integration (ServiceTitan, Google, Square)
Cloud/Infrastructure: AWS, Google Cloud Platform, Docker, Nginx, Linux, VNets, NSGs, private endpoints, Application Gateway, Front Door, CDN, autoscaling, high availability, DNS/SSL
DevOps/CI-CD: GitHub Actions, CI/CD pipelines, monitoring and observability, alerting and incident response, cloud cost optimization, Git, Agile/Scrum

Experience

Software Engineer February 2023 – Present
Ace Hardware Corporation *Oak Brook, IL*

- Won first place in Ace Hardware's IT hackathon for an AI coaching assistant that gave HVAC service representatives in-call guidance and live translation, then analyzed recordings to surface upsell opportunities. Presented to the head of IT and now an active company project.
- Integrated ServiceTitan authentication and the Google Reviews API to deliver real-time service data to franchise storefronts nationwide, working within third-party authentication, rate-limit, and data-freshness constraints.
- Architected and delivered 30+ RESTful APIs for the Paint Redesign and Home Services platforms, defining the service contracts and integration patterns now used across franchise and corporate systems.
- Led the performance and caching architecture for Ace's franchise and corporate storefronts, implementing multi-instance Redis, Azure Blob image caching, and middleware optimization that cut page load times by 98%.
- Led security hardening across Ace online applications: migrated service account credentials to Azure Key Vault, modernized authentication to Entra ID managed identities, and set secret-handling standards adopted on every web property.
- Containerized applications with Docker and built GitHub Actions CI/CD pipelines to standardize releases across environments. Configured Azure Monitor alerting to on-call mobile notifications and led Azure cost optimization.
- Built a reusable React component library adopted across Ace web properties, eliminating duplicated front-end work and enforcing brand consistency.

Software Engineer (Contract) June 2022 – January 2023
NetCashPro *Chicago, IL*

- Embedded with the client to replace a manual financial reporting process, scoping and delivering a CFO Analysis application (ASP.NET MVC, C#) that automated profit/loss, cash flow, and revenue calculations from Excel and ERP sources.
- Gathered requirements directly from the client, scoped the work, and delivered end to end through architecture, implementation, and rollout.
- Built the REST API layer and React reporting front end with real-time data visualizations used directly in client financial decisions.
- Owned AWS deployment with testing and code-review gates to ensure performance and reliability.

Software Engineering Intern May 2021 – August 2021
Orblogic (HRMatrix) *Upper Saddle River, NJ*

- Delivered 20+ RESTful APIs serving 50+ client websites, improving performance and scalability.
- Reduced API response times 30% through endpoint and query optimization across major client projects.
- Contributed to microservices architecture design in an agile Scrum team, working directly with clients to align technical decisions with business goals.

Education

M.S. in Computer Science In Progress, Expected 2028
Georgia Institute of Technology *Atlanta, GA*

B.S. in Computer Science May 2022
University of Illinois Chicago *Chicago, IL*
